

## **NZJABR Ethical Practice**

**Authorship of the paper:** The Vancouver Convention on authorship applies:

- Everyone who has made a significant contribution to the research and to the drafting or revision of the submission is named as an author.
- All named authors have made a significant contribution to the research and to the drafting or revision of the submission.
- All named authors have given approval for the submitted version of the work to be published in this journal and take responsibility for its accuracy and integrity.
- Contributors who do not meet these criteria for authorship are acknowledged for their contribution.

**Originality and plagiarism:** Authors warrant that:

- The submission is their own original work.
- The submission does not have substantial similarities with work previously published by any of the authors or submitted to another publication.
- The work of others has been appropriately cited, quoted, and referenced.
- The editor will be notified promptly if authors identify a significant error or inaccuracy in their work, so that the work can be retracted or corrected.

**Data integrity:** Authors warrant that:

- Data are true and have not been misrepresented.
- Data have been collected in accordance with ethics approval from an appropriate body which is identified in the submission.

**Copyright permissions:** Where the work includes any text, illustrations, charts, tables, photographs, or other material from previously published sources, authors warrant that:

- Permission to reproduce that content has been obtained from the rights holder; or
- That content is in the public domain (not protected by copyright) or
- That content is available under a licence that permits use in this journal, and is used in compliance with the terms of that licence.

**Declarations:** All submissions must include:

- Disclosure of all relationships that could be viewed as a potential conflict of interest. This includes identification of any sources of funding for the research.
- Disclosure of whether and how AI tools were used in writing the work.
- Statements of compliance, if the reported research involves chemicals, procedures or equipment that have any unusual hazards inherent in their use.
- Confirmation that the submission complies with the NZJABR statement of ethical practice, as to authorship, originality, data integrity and ethics approval, and copyright permissions.

**Complaints:**

- Any complaint received about any article before or after publication by the journal will be investigated by the editor. Actions taken may include further review, rejection of a submission, correcting or retracting a published article.
- Any complaint received about the journal itself will be investigated by two members of the Editorial Board.
